

O₂ PRESENTS

THE END

Protect your devices. Always.

Features and benefits of McAfee Multi Access from O₂

What is it?

McAfee Multi Access is an online security app that protects all your devices, except Windows Phones and BlackBerry smartphones, all at once.

How it works

The simple monthly subscription covers up to five devices. It protects your PCs, Macs, laptops, smartphones and tablets from viruses, spam, malware and identity theft. And all devices can be managed in one place with the online management console.

Who's it for?

It's best suited to companies with up to 20 employees. The Government estimate that security attacks can cost even small business between £35,000 and £65,000.

Key features and benefits

McAfee Multi Access is a simple and cost effective way to protect all your devices from security attacks.

What you get	Why it's good for business
Online management console	Manage devices and add users via the simple online management console.
Auto updates	Cyber attacks get more sophisticated every day. But don't worry, McAfee Multi Access updates automatically to make sure you have the very latest protection against the very latest threats.
Automated installation	Use just one link and McAfee auto detects what the device is and installs the relevant security. It's as quick and as simple as that.
Remote tracking	Know exactly where all your smartphones and tablets are. Track them on a map and if they are not where they should be you can lock them remotely.
Fixed monthly costs	Pick the fixed price package that's right for you. There are no extras. No hidden charges. Just one simple subscription from just £3 per user, per month (ex vat).

Total protection from the world's largest security company

Search, shop and bank online with peace mind

Stop spam and phishing emails reaching your inbox. McAfee also warns you of untrustworthy websites and wifi networks before you connect to them. And it works across different browsers too, including Safari, Chrome and Firefox.

Secure your Smartphone and tablets

With real-time protection against mobile viruses and spam, your mobiles will be safe and sound. You can safeguard Android devices from apps containing malware and if your Smartphone or tablet is lost or stolen, McAfee Multi Access can locate it, lock it or wipe it.

A better way to manage your passwords

Lots of passwords can mean lots of ways in for potential cyber attacks. With McAfee you can create one master password to securely log in to all your devices. And you can auto-populate usernames and passwords to save time too.

Keep customers safe too

Passing viruses on to your clients or suppliers can be a bit embarrassing. So McAfee Multi Access scans everything you send. Losing customer information can have legal consequences. But with McAfee important customer files are encrypted and locked with a password. So even if you lose your device, their details are safe.

Why O₂?

We've tried and tested the best technology out there. So it's easier for you to choose what's best for your business.

- **We're with you all the way.** We'll help get you started and we're right here whenever you need help. Call us, pop into store or have a webchat.
